In response to the Office Action dated April 26, 1999, please amend the application as follows.

IN THE CLAIMS

36. (Twice amended) A polarizing device comprising:

a transparent plate which has a polarizing beam splitting surface on one surface and a reflection surface on the other surface, wherein light is incident on said substrate from said one surface side to be split into reflected light and transmitted light by said polarizing beam splitting surface so that the transmitted light is directed to said [reflection] other surface and the transmitted light is caused to [transmit] pass through said [polarizing beam splitting] one surface by reflection by said reflection surface; and

a half wavelength plate [means] for causing [a] polarizing [state] directions of the transmitted light [which has been reflected by said reflection surface and transmitted through said
